

SCOPE OF WORK

AI-Powered Lead Generation & Outbound Calling System

Prepared For Tony Financial Services Company	Prepared By Yaser AI Automation Specialist
Date April 16, 2026	Project Duration 4 Weeks
	Version v1.0 Initial Proposal

1. Project Objectives

The goal of this engagement is to design, build, and deploy a fully automated AI-driven outbound sales and lead generation system tailored to the client's financial services business. The system will handle end-to-end outreach across calls, SMS, and email — minimizing manual effort while maximizing qualified appointment bookings.

The specific objectives are:

- Automate outbound calling to 100–500 B2B prospects per day using AI voice agents
- Qualify leads into three distinct ICP profiles and route them to the correct sales representative
- Trigger SMS and email follow-up sequences automatically when calls go unanswered
- Enrich and build a targeted lead list by scraping job portals and LinkedIn based on ICP criteria
- Send personalized cold outreach emails via the client's Go High Level account with intelligent follow-up logic
- Handle inbound calls on a dedicated phone number with auto-routing and calendar booking capabilities
- Provide full transcript logging and post-call summaries routed to the client via email or CRM
- Deliver a system the client fully owns, with APIs exposed for future self-management

2. Technical Approach

2.1 Lead Scraping & Enrichment

Prospects will be scraped from job portals including LinkedIn, Indeed, Dice, Monster, Glassdoor, and ZipRecruiter. Scraping will be filtered by the client-provided Ideal Customer Profile (ICP), targeting companies by location, company size, industry, and service type. Scraped records will be enriched with business contact data including decision-maker emails and direct lines.

2.2 Outbound Email System

The existing Go High Level (GHL) account will be leveraged for email sending. A dedicated outbound email address (e.g., sales@domain.com) will be configured and warmed up. Three email templates will be designed — one per target profile. An AI-powered follow-up sequence will replace the legacy hard-coded drip schedule, using open/reply signals to dynamically decide next steps. If a contact at one profile does not respond, the system escalates to an alternate contact at the same company before marking the lead as cold.

2.3 AI Outbound Calling Agent

Three AI voice agents will be configured — one per target business profile — each with a customized script, personality, and knowledge base. The agents will conduct outbound calls, handle objections intelligently, and book calendar appointments for interested prospects. Call volume will be set between 100–500 calls/day with parallel line support. Post-call, transcriptions are automatically processed by a classification agent to determine lead status and trigger the appropriate next workflow.

2.4 SMS & Email Fallback Sequences

When a call is unanswered, the system automatically initiates an SMS outreach followed by an email, then places the lead into a drip sequence. The number of call attempts before switching to SMS/email fallback is configurable. All responses received via SMS or email are captured and forwarded to the client's team.

2.5 Inbound Call Handling

A dedicated inbound phone number will be connected to an AI agent sharing the same knowledge base. The inbound agent will answer questions, qualify callers, and book

appointments on the appropriate salesperson's or owner's calendar. Calls can also be auto-routed to a live representative when required.

2.6 Reporting & Notifications

After each call, a formatted summary — including the transcript, lead classification, and recommended next action — will be delivered by email notification to the designated team member. All call recordings, SMS logs, and email interactions will be exportable to a CRM or spreadsheet of the client's choice.

3. Development Plan — Sprint Breakdown

The project will be delivered over four (4) one-week sprints. The first three weeks will build and test the core system (MVP). The fourth week is reserved for refinements, client feedback, and go-live preparation.

Sprint 1: Foundation & Lead Pipeline | Week 1

Task / Component	Deliverable
ICP definition & lead scraping setup	Configured scraper targeting 3 ICPs
Multi-platform scraping (LinkedIn, Indeed, etc.)	Initial lead list (~500–1,000 records)
Lead enrichment pipeline (emails, contacts)	Enriched contact database
GHL email domain configuration & warm-up	Warmed outbound email account
Email templates design (3 profiles)	3 approved email templates

Sprint 2: AI Calling Agents & Call Routing | Week 2

Task / Component	Deliverable
Voice agent setup (VAPI or Retell)	3 configured outbound calling agents
Agent scripts & knowledge base loading	Custom scripts per ICP profile
Calendar booking integration	Auto-booking on salesperson calendars
Inbound phone number + agent configuration	Live inbound AI agent
Post-call transcription & classification agent	Automated lead classification logic

Sprint 3: Automation, Follow-ups & Integrations | Week 3

Task / Component	Deliverable
SMS fallback sequence (on no-answer)	Auto-SMS triggered post-missed call
Email drip fallback integration	Lead enrolled in email drip on no-answer
Intelligent follow-up logic (open/reply signals)	AI-driven follow-up sequencing
CRM / GHL data routing & notifications	Post-call email summaries to team
End-to-end pipeline testing	Full system QA test results

Sprint 4: Testing, Refinements & Go-Live | Week 4

Task / Component	Deliverable
Client UAT (User Acceptance Testing)	Tested system with client feedback
Agent script tuning & voice selection	Refined agent personalities/voices
Bug fixes & edge case handling	Production-ready system
API documentation & client handover	Full ownership handover + API docs
Go-live support	Live system, first batch of calls launched

4. Tech Stack

Category	Tool / Platform	Purpose
AI Voice Agent	VAPI / Retell AI	Outbound & inbound calling agents
AI Voice (TTS)	ElevenLabs	High-quality natural voice synthesis
AI Language Model	OpenAI / Claude (via API)	Agent intelligence & classification
Email Platform	Go High Level (GHL)	Email sending, drip sequences, CRM

Lead Scraping	Custom Scrapers	LinkedIn, Indeed, Dice, Monster, ZipRecruiter
SMS Outreach	VAPI / Twilio	Automated SMS fallback sequences
Calendar Booking	GHL / Calendly	Auto-appointment scheduling
Automation/Orchestration	Make.com / n8n	Workflow automation & triggers
Data Storage	Airtable / Google Sheets	Lead database & call logs
Notifications	Email / Webhook	Post-call summaries to client team

5. Deliverables

Upon project completion, the client will receive full ownership of the following:

- Fully configured AI outbound calling system with 3 agent profiles (100–500 calls/day capacity)
- Inbound AI agent with auto-routing and calendar booking
- Automated lead scraping pipeline targeting 3 ICPs across 6 platforms
- Lead enrichment database with decision-maker contact details
- Go High Level email campaigns with 3 profile-specific templates and intelligent follow-up sequences
- SMS fallback automation triggered on missed calls
- Post-call classification engine with transcript-based lead routing
- Automated email notification system delivering call summaries to designated team members
- CRM/spreadsheet data export integration
- API documentation and system walkthrough for client self-management
- 4 weeks of development support through go-live

6. Timeline

Sprint	Focus	Dates	Milestone
Sprint 1	Lead Pipeline & Email Setup	Week 1	Lead database ready, email warmed
Sprint 2	AI Calling Agents	Week 2	Agents live, calendar booking active
Sprint 3	Automation & Integrations	Week 3	Full pipeline operational (MVP)
Sprint 4	Testing & Go-Live	Week 4	System launched, client handed over

8. Terms & Conditions

- All code, automations, workflows, and configurations built under this engagement are fully owned by the client upon final payment.
- Source APIs and access credentials will be provided to the client at project close.
- The client is responsible for providing the ICP definition, GHSL account access, and knowledge base materials in a timely manner.
- Any out-of-scope requests identified during development will be scoped separately and quoted accordingly.
- Yaser will provide up to 2 weeks of post-launch support for critical bugs at no additional charge.
- Ongoing maintenance, new agents, or additional workflows post-launch can be quoted as a retainer or per-project arrangement.
